SUMMARY OF CLAIMED SUBJECT MATTER

FOR DEFECTIVE APPEAL BRIEF

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

In response to the Notice of Non-Complaint Appeal Brief dated July 18, 2007, please enter the following SUMMARY OF CLAIMED SUBJECT MATTER. As the Office holds the brief to be defective solely due to appellant's failure to provide a summary of the claimed subject matter as required by 37 CFR 41.37(c)(1)(v), only the SUMMARY OF CLAIMED SUBJECT MATTER, not the entire brief, is enclosed herewith.

Also enclosed herewith is a copy of the Notice of Non-Complaint Appeal Brief.

JUL 2 5 2007

Docket No. JCLA7632 US App. No. 10/013,981

V. SUMMARY OF CLAIMED SUBJECT MATTER

The claimed subject matter of independent claim 1 involved in the appeal is directed to a transmission method for identifying infrared transmission head functions through an infrared controller coupled to an infrared transmission head (as shown in Fig. 4, and as discussed in Lines 1-3 and 5 in Para. [0018]). This method comprises the following steps (Fig.4 and Line 1 in Para. [0018]). As in step S600, the infrared controller is set in a test circuit mode (Fig.4 and Line 4 in Para. [0018]). As in step S610, a test brand name and its corresponding test transmission mode of the infrared transmission head are selected among a plurality of brand names (Fig.4 and Lines 5-7 in Para [0018]). Said infrared controller is programmed according to the test transmission mode corresponding to the test brand name of said infrared transmission head (Fig.3 and Lines 23-27 in Para. [0017]). As in step S620, said infrared controller sends out transmission test data corresponding to the test brand name to the infrared transmission head, and receives test data according to the test transmission mode corresponding to the test brand name of said infrared transmission head (Fig.4 and Lines 8-9 in Para. [0018]). As in steps S630 and S640, said test brand name and associated test transmission mode of said infrared transmission head are registered when said transmission test data and said received test data are identical (Fig. 4 and Lines 9-11 in Para. [0018]). As in step S650, said infrared transmission head operates according to the registered test brand name and test transmission mode of said infrared transmission head (Fig. 4 and Lines 11-12 in Para. [0018]). Wherein, said infrared controller's sending out transmission test data and said infrared controller's receiving test data occur concurrently (as shown in step S620 and Line 8 in Para. [0018]).

The claimed subject matter of independent claim 6 involved in the appeal is directed to a transmission method for identifying infrared transmission head functions (as shown in Fig. 4, and as discussed in Lines 1-3 in Para. [0018]). This method comprises the following steps (Fig.4 and Line I in Para. [0018]). An infrared controller is coupled to an infrared transmission head (Fig.3 and Line 5 in Para. [0018]). Said infrared controller is programmed (Fig.3 and Lines 26-27 in Para. [0017]). As in step S620, said infrared controller sends out transmission test data corresponding to the test brand name to the infrared transmission head, and receives

Docket No. JCLA7632 US App. No. 10/013,981

test data according to the test transmission mode corresponding to the test brand name of said infrared transmission head (Fig.4 and Lines 8-9 in Para. [0018]). As in steps S630 and S640, said test brand name and associated test transmission mode of said infrared transmission head are registered when said transmission test data and said received test data are identical (Fig.4 and Lines 9-11 in Para. [0018]). Wherein, said infrared controller's sending out transmission test data and said infrared controller's receiving test data occur concurrently (as shown in step S620 and Line 8 in Para. [0018]).
